

Avaflo

Premier De-luxe Kit

w: abp-bathrooms.co.uk

t: +44(0)1939 236 236

e: info@abp-bathrooms.co.uk

The Avaflo includes:

- 1/2" In-line Themostatic Mixing Valve
- De-Luxe Brass Shower Handset
- Brass Handset Bracket-Isolating Valve
- 1.20m Heavy Duty Chrome Hose

The interconnecting plumbing parts are not provided as these can be too varied.

The installation of the Avaflo Kit should only be attempted by tradesmen with plumbing skills. The instructions are only a guide.

The Thermostatic Mixing Valve provided is a 1/2" BSP In-line valve with internal non-return valves and is intended to be positioned discreetly so easy access is all that is required. Once the temperature has been set adjustment is rarely necessary.

It is advised that the mixed outlet pipe from the Thermostatic Valve should be firmly secured (not a flexible Hose) as this will give rigidity to the Stop Valve when in use.

The Brass Handset Bracket-Isolating Valve can be mounted on the panel and secured with a 1/2" backnut or threaded fitting depending on the depth of the panel. It is recommended the panel is not relied upon for stability but that the pipework and fittings provide rigidity.

In general use, it is highly recommended that the Stop Valve is turned off after use, to relieve the pressure in the Hose & Handset and reduce dripping. Occasionally it may be necessary to remove and soak the Handset in descaling fluid.
